# Git 의 설치

The screenshot shows the Git website (git-scm.com) in a web browser. The page features the Git logo and the tagline "--local-branching-on-the-cheap". A search bar is located in the top right corner. The main content area describes Git as a free and open source distributed version control system designed to handle everything from small to very large projects with speed and efficiency. It also mentions that Git is easy to learn and has a tiny footprint with lightning fast performance, outclassing SCM tools like Subversion, CVS, Perforce, and ClearCase with features like cheap local branching, convenient staging areas, and multiple workflows. A section titled "Learn Git in your browser for free with Try Git." is also present. Below this, there are four sections: "About" (The advantages of Git compared to other source control systems.), "Documentation" (Command reference pages, Pro Git book content, videos and other material.), "Downloads" (GUI clients and binary releases for all major platforms.), and "Community" (Get involved! Bug reporting, mailing list, chat, development and more.). On the right side, there is a section for the "Latest source Release 2.9.3" with "Release Notes (2016-08-12)" and a button for "Downloads for Windows". A diagram on the right side of the page illustrates the Git branching model with stacks of code and colored lines representing branches and merges.

Git --local-branching-on-the-cheap

Search entire site...

Git is a **free and open source** distributed version control system designed to handle everything from small to very large projects with speed and efficiency.

Git is **easy to learn** and has a **tiny footprint with lightning fast performance**. It outclasses SCM tools like Subversion, CVS, Perforce, and ClearCase with features like **cheap local branching**, convenient staging areas, and **multiple workflows**.

Learn Git in your browser for free with **Try Git**.

**About**  
The advantages of Git compared to other source control systems.

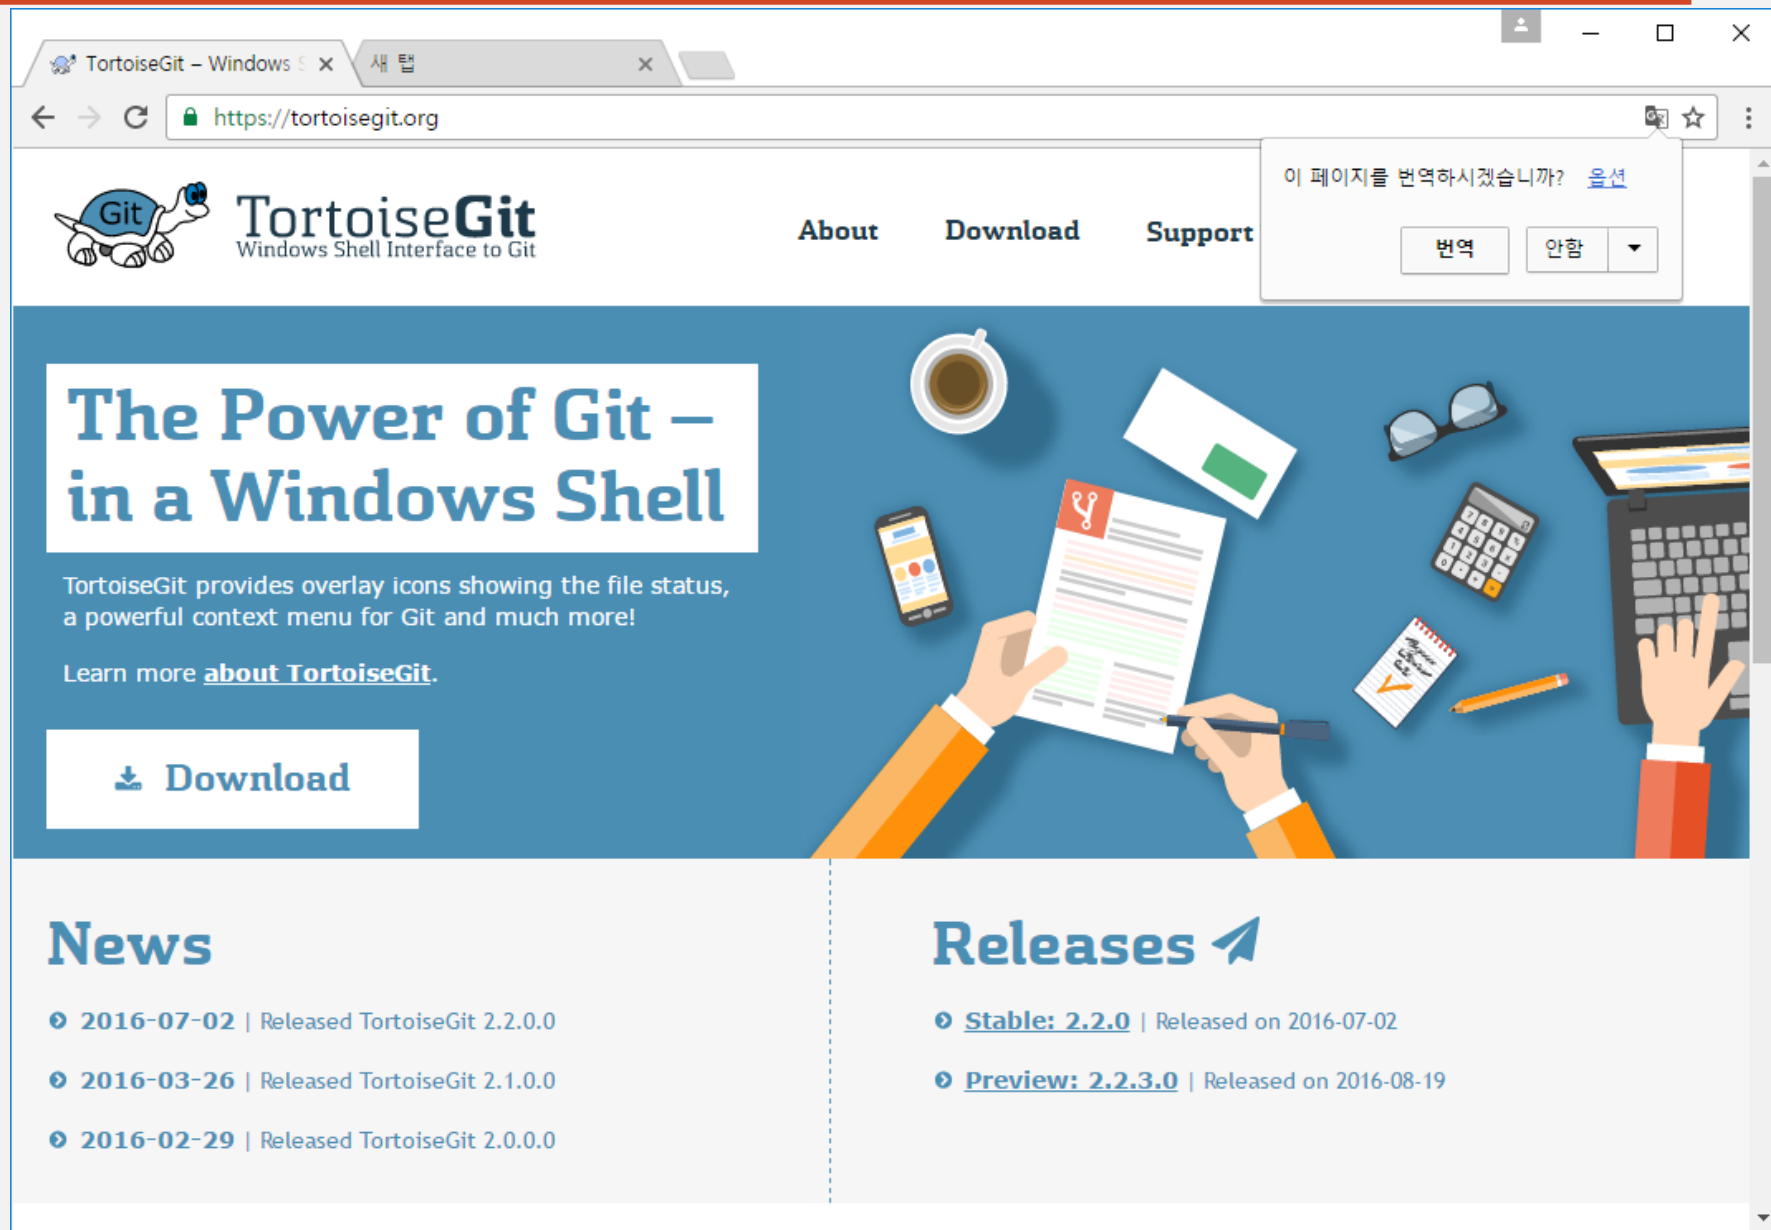

**Documentation**  
Command reference pages, Pro Git book content, videos and other material.

**Downloads**  
GUI clients and binary releases for all major platforms.

**Community**  
Get involved! Bug reporting, mailing list, chat, development and more.

Latest source Release  
**2.9.3**  
Release Notes (2016-08-12)

# 파이썬의 특징

## 인간다운 언어이다

프로그래밍이란 컴퓨터에 인간이 생각하는 것을 입력시키는 행위라고 할 수 있다. 앞으로 살펴볼 파이썬 문법들에서도 볼 수 있겠지만 파이썬은 사람이 생각하는 방식을 그대로 표현할 수 있도록 해주는 언어이다. 따라서 프로그래머는 굳이 컴퓨터식 사고 방식으로 프로그래밍을 하려고 애쓸 필요가 없다. 이제 곧 어떤 프로그램을 구상하자마자 생각한대로 쉽게 술술 써내려가는 여러분의 모습에 놀라게 될 것이다. 아래 예문을 보면 이 말이 더 쉽게 이해될 것이다.

```
if 4 in [1,2,3,4]: print ("4가 있습니다")
```

위의 예제는 다음처럼 읽을 수 있다:

"만약 4가 1,2,3,4중에 있으면 "4가 있습니다"를 출력한다."

프로그램을 모르더라도 직관적으로 무엇을 뜻하는지 알 수 있지 않겠는가? 마치 영어문장을 읽는 듯한 착각에 빠져든다.

---

## 간결하다

파이썬은 간결하다. 이 간결함은 파이썬을 만든 귀도(Guido)의 의도적인 산물이다. 만약 어떤 언어(Perl?)가 하나의 일을 하기 위한 방법이 100가지라면 파이썬은 가장 좋은 방법 1가지를 선호한다. 이 파이썬의 간결함이란 철학은 소스코드에도 그대로 적용되어 파이썬 프로그래밍을 하는 사람들은 잘 정리되어 있는 소스코드를 볼 수 있게 되었다. 다른 사람들의 소스 코드가 한눈에 들어오기 때문에 이 간결함은 공동 작업에 매우 큰 역할을 하게 되었다. 다음은 파이썬 프로그램의 예제이다:

```
# simple.py
languages = ['python', 'perl', 'c', 'java']

for lang in languages:
    if lang in ['python', 'perl']:
        print("%6s need interpreter" % lang)
    elif lang in ['c', 'java']:
        print("%6s need compiler" % lang)
    else:
        print("should not reach here")
```

---

## 프로그래밍이 재밌다

이 부분이 가장 강조하고 싶은 부분이다. 필자에게 파이썬만큼 프로그래밍을 하는 순간을 즐기게 해준 언어는 없었던 것 같다. 파이썬은 다른 것에 신경 쓸 필요 없이 내가 하고자 하는 부분에만 집중할 수 있게 해주기 때문이다. 억지로 만든 프로그램과 즐기면서 만든 프로그램, 과연 어떤 프로그램이 좋을까? 리누즈 토발즈는 재미로 리눅스를 만들었다고 하지 않는가? 파이썬을 배우고 나면 다른 언어로 프로그래밍을 하는 것에 지루함을 느끼게 될 지도 모른다. 조심하자! ^^

---

## 개발속도가 빠르다

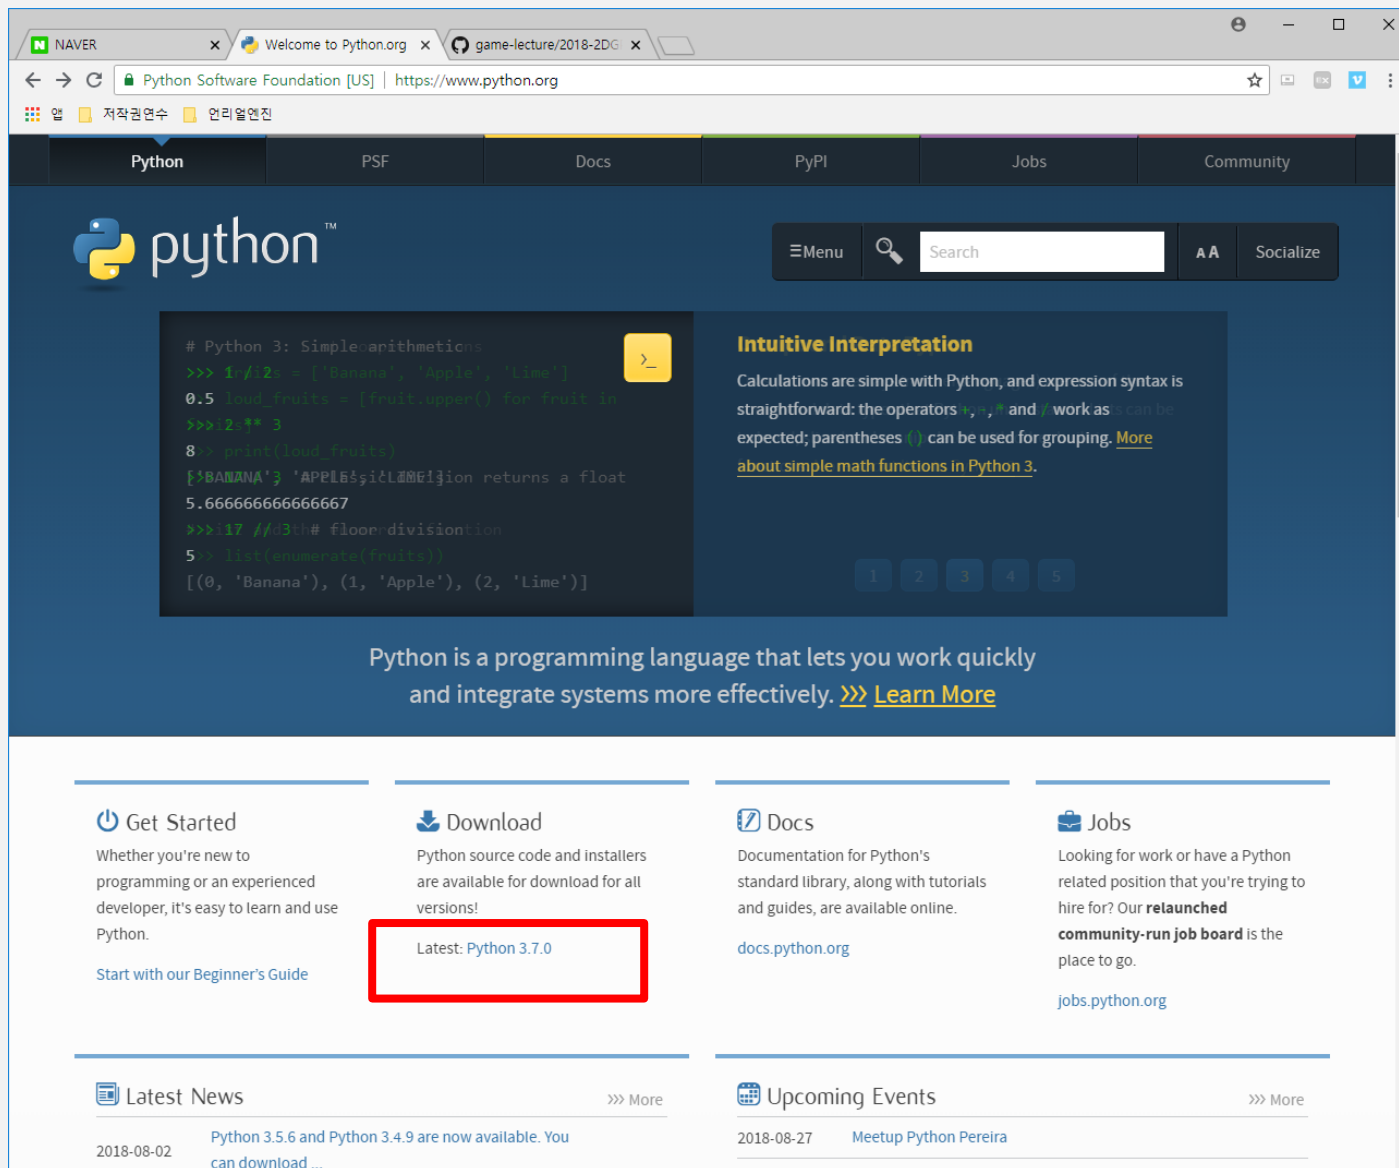

마지막으로 다음의 재미있는 말로 파이썬의 특징을 마무리하려 한다.

*Life is too short, You need python.*

# Python Key Words

# 변수에는 문자열(string)을 담을 수 있다.

---

A screenshot of a Python 3.6.3 Shell window. The window has a title bar with the text 'Python 3.6.3 Shell' and standard window controls (minimize, maximize, close). Below the title bar is a menu bar with 'File', 'Edit', 'Shell', 'Debug', 'Options', 'Window', and 'Help'. The main area is a text editor with a light blue background. It contains the following code:

```
>>>  
>>> name1 = "Trump"  
>>> name2 = '강다니엘'  
>>>  
>>>  
>>>  
>>>  
>>> print(name1)  
Trump  
>>> print(name2)  
강다니엘  
>>> |
```

The output of the code is displayed below the input lines. At the bottom right of the window, the status bar shows 'Ln: 173 Col: 4'.

문자열은 문자들의 집합임. 여러 개의 문자들을 나열한 것. 큰따옴표 또는 작은 따옴표로 감쌌. 한글, 영어 상관없음.

# 기본 자료형(Type)

---

- 변수에는 다양한 종류의 정보를 담을 수 있음.
- 어떤 변수의 자료형을 알고 싶으면, type(변수명) 함수를 이용함.

order = 4     정수형 int

pi = 3.141592   실수형 float

name1 = "Trump"   문자열형 str  
name2 = 'Daehyun'

result = True   참거짓형 bool

A screenshot of a Python 3.6.3 Shell window. The window has a title bar with the text "Python 3.6.3 Shell" and standard window controls (minimize, maximize, close). Below the title bar is a menu bar with the following items: File, Edit, Shell, Debug, Options, Window, and Help. The main area of the window contains a series of Python commands and their outputs, color-coded for readability. The commands are: three prompt characters (>>>), an assignment of 4 to the variable 'order', an assignment of 3.141592 to the variable 'pi', an assignment of the string "Trump" to the variable 'name', another set of three prompt characters, and then three calls to the 'type()' function on the variables 'order', 'pi', and 'name' respectively. The outputs are: '<class 'int'>', '<class 'float'>', and '<class 'str'>'. The window also features a vertical scrollbar on the right side and a status bar at the bottom right showing "Ln: 199 Col: 4".

```
>>>
>>> order = 4
>>> pi = 3.141592
>>> name = "Trump"
>>>
>>> type(order)
<class 'int'>
>>> type(pi)
<class 'float'>
>>> type(name)
<class 'str'>
>>>
```

Ln: 199 Col: 4

```

A screenshot of a Python 3.7.0 Shell window. The window has a title bar with the text "Python 3.7.0 Shell" and standard window controls (minimize, maximize, close). Below the title bar is a menu bar with the following items: File, Edit, Shell, Debug, Options, Window, and Help. The main area of the window contains a series of Python commands and their outputs, color-coded as follows: prompt characters are red, strings are green, keywords and function names are black, and boolean values are blue. The commands and outputs are: 1. Prompt: `>>> 'zwi' in score`, Output: `True`. 2. Prompt: `>>> 'momo' in score`, Output: `False`. 3. Prompt: `>>>`. 4. Prompt: `>>> score.clear()`. 5. Prompt: `>>> score`, Output: `{}`. A vertical scrollbar is visible on the right side of the code area. At the bottom right of the window, the status bar shows "Ln: 48 Col: 4".

```
>>> 'zwi' in score
True
>>> 'momo' in score
False
>>>
>>> score.clear()
>>> score
{}
Ln: 48 Col: 4
```

# Tuple

- 여러 개의 값을 동시에 관리. 리스트와 유사.
- 하지만, 기본적으로 값을 바꿀 수는 없음. ==> 프로그램 중 변경이 되지 않는 값들의 모음이 필요할 때 사용하면 됨.

# Complex Data Type

---

## ■ List – list

- 순서가 있는, 중복을 허용하는 데이터들의 집합.
- 원하는 데이터를 찾기 위해, 순서 index 를 이용.

[ val1, val2, ... ]

## ■ Dictionary – dict

- 검색을 위한 키를 갖는 데이터들의 집합
- key – value 쌍 들의 집합

{ key1: val1, key2: val2, ... }

## ■ Tuple – tuple

- 순서가 있는, 중복을 허용하는 데이터들의 집합
- 다만, 데이터값을 변경하는 것은 불가

( val1, val2, ... )

## ■ Set – set

- 중복을 허용하지 않는, 순서에 상관없는 데이터들의 집합

{ val1, val2, ... }
